Appendix A: Glossary Of Terms 22

1. EXECUTIVE SUMMARY

1.1 Engagement Overview

Prosigns is honoured to present this SaaS software development proposal for BPDS CareTrack™ — a comprehensive, HIPAA-compliant Software-as-a-Service (SaaS) platform engineered to transform treatment engagement, accountability monitoring, and client retention across substance use disorder treatment programs, recovery housing, drug courts, and justice-involved services.

This proposal responds to Brittany Pelletier Document Studio, LLC's strategic initiative to develop and commercialize a practitioner-designed technology solution that addresses critical operational gaps in the behavioral health and criminal justice ecosystem. The proposed platform directly supports BPDS's successful RFP submission to the State of New Hampshire Department of Health and Human Services.

1.2 Engagement at-a-Glance

Parameter	Details
Project Name	**BPDS CareTrack™**
Engagement Type	**Fixed-Price Development**
Project Duration	**28 Weeks (7 Months)**
Delivery Model	**Agile with Milestone-Based Phases**
Technology Stack	**Flutter | Angular | Node.js | PostgreSQL | Redis**
Compliance Standards	**HIPAA | 42 CFR Part 2 | NIST 800-53/171**
Warranty Period	**90 Days Post-Acceptance**

1.3 Strategic Value Proposition

1. **Market Differentiation:** Purpose-built by a practitioner with direct experience in DHHS programs, recovery housing, and justice-involved systems — not a generic case management retrofit.
2. **Revenue Acceleration:** Platform enables immediate pursuit of state contracts with significant recurring revenue potential.
3. **Scalable Architecture:** Multi-tenant SaaS design supports unlimited organizational deployments without infrastructure rebuild.
4. **Compliance-First Design:** HIPAA, 42 CFR Part 2, and NIST security controls embedded from architecture through deployment.
5. **Low-Barrier Accessibility:** Designed for high-stress, low-tech users with SMS fallback, offline capability, and plain-language interfaces.

2. UNDERSTANDING OF REQUIREMENTS

2.1 Business Context Analysis

Based on comprehensive review of your RFP submission to New Hampshire DHHS, stakeholder discussions, and industry analysis, Prosigns has developed a thorough understanding of the operational environment, user requirements, and technical constraints governing this engagement.

Problem Statement

Treatment providers, recovery housing programs, drug courts, and probation/parole agencies operate within fragmented ecosystems characterized by:

- Communication Silos: Clients, case managers, and oversight entities lack unified communication channels, leading to missed touchpoints and delayed interventions.
- Documentation Inconsistency: Manual tracking systems produce incomplete records, audit vulnerabilities, and compliance gaps.
- Accountability Gaps: Limited real-time visibility into client engagement, attendance, and milestone achievement.
- Delayed Risk Detection: Disengagement indicators identified too late for effective intervention, increasing dropout rates.
- Technology Barriers: Existing solutions designed for tech-savvy users, excluding high-stress, low-tech populations.

2.2 Stakeholder Analysis

User Role	Description	Primary Needs	Success Metrics
Client	Individuals in treatment, drug court, probation/parole, or recovery housing	Simple check-ins, reminders, secure messaging, progress visibility	Engagement rate, appointment adherence, retention duration
Provider	Case managers, probation officers, treatment counselors	Caseload oversight, real-time alerts, documentation, communication	Response time, intervention timeliness, caseload efficiency
Administrator	Program directors, supervisors, organizational leadership	Role management, compliance reporting, analytics, billing	Program outcomes, audit readiness, operational efficiency
Operator	Counties, agencies, organizations purchasing platform access	Multi-program support, data isolation, customization, support	User adoption, contract renewal, expansion

2.3 Regulatory & Compliance Framework

The platform must operate within a stringent regulatory environment. Prosigns acknowledges and commits to full compliance with:

Standard	Application & Implementation
HIPAA	Protected Health Information (PHI) safeguards, encryption, access controls, breach notification, BAA compliance
42 CFR Part 2	Enhanced protections for substance use disorder treatment records, consent management, restricted disclosure
NIST SP 800-53	Security control framework for federal information systems, control selection and implementation documentation
NIST SP 800-171	Protection of Controlled Unclassified Information (CUI), State of NH adopted baseline
RSA Chapter 21-R	New Hampshire information technology standards, open data formats, interoperability requirements

3. SCOPE OF WORK

3.1 Deliverable Summary

ID	Deliverable	Description
D1	Mobile Application (Flutter)	Cross-platform iOS/Android app with client and provider interfaces
D2	Web Admin Portal (Angular)	Comprehensive administrative dashboard and provider workstation
D3	Backend API (Node.js)	RESTful API services with business logic and integrations
D4	Database (PostgreSQL)	Multi-tenant data architecture with encryption and audit logging
D5	Cloud Infrastructure	HIPAA-eligible hosting environment with monitoring and backup
D6	Security Framework	Authentication, authorization, encryption, and compliance controls
D7	Documentation Package	Technical docs, user guides, admin manuals, API reference
D8	Training Program	Role-based training sessions with recorded materials
D9	Laboratory Integrations	Bidirectional HL7 integration with Aegis Sciences and Dominion Diagnostics for UA results

3.2 Mobile Application Specifications

Technology: Flutter 3.x (Dart) | Single codebase for iOS and Android | Native performance

Client Portal Features

Feature	Functional Description
Daily/Weekly Check-ins	Configurable check-in prompts with mood tracking, goal reporting, and compliance verification
Appointment Management	Calendar integration, push notifications, SMS reminders, rescheduling requests
Document Upload	Camera capture and file upload for attendance verification, UA results, receipts, certificates
Secure Messaging	Encrypted in-app messaging with case managers and providers, read receipts
Progress Dashboard	Compliance streaks, milestone achievements, visual progress indicators, gamification elements
Housing Tracker	Rent payment tracking, meeting attendance, positive/negative UA history, balance visibility
Resource Directory	Searchable database of treatment centers, support services, emergency contacts
Offline Mode	Critical features available without connectivity, automatic sync on reconnection

Provider Mobile Features

Feature	Functional Description
Caseload Overview	At-a-glance status of all assigned clients with priority indicators
Real-time Alerts	Push notifications for missed check-ins, appointments, compliance concerns
Quick Documentation	Mobile-optimized note entry, voice-to-text, template-based logging
Client Communication	Secure messaging, appointment scheduling, document requests

3.3 Web Admin Portal Specifications

Technology: Angular 18+ | TypeScript | Responsive Design | Progressive Web App (PWA) Capable

Administrator Dashboard

Module	Capabilities
Organization Management	Tenant configuration, branding, program setup, feature toggles
User Administration	Create/edit/deactivate users, bulk import, role assignment, password policies
Role-Based Access Control	Granular permission configuration, custom roles, hierarchical access
Assignment Management	Provider-to-client mapping, caseload balancing, transfer workflows
Analytics Dashboard	Program-wide KPIs, engagement trends, retention metrics, outcome tracking
Compliance Reporting	Audit logs, access reports, security events, state reporting exports
Billing Management	Subscription management, usage tracking, invoice generation (SaaS model)
Data Export	CSV, Excel, PDF exports for state reporting and data portability

3.4 Backend Infrastructure Specifications

Technology: Node.js 20 LTS | NestJS Framework | PostgreSQL 15+ | Redis | TypeScript | Docker/Kubernetes

API Services

- RESTful API Architecture: OpenAPI 3.0 specification, versioned endpoints, comprehensive documentation
- Authentication Service: JWT with refresh token rotation, OAuth 2.0, session management, MFA support
- Authorization Middleware: Role-based permissions, resource-level access control, policy enforcement
- Notification Engine: Push notifications (FCM/APNs), SMS gateway (Twilio), email service (SendGrid/SES)
- Real-time Services: WebSocket connections for live updates, messaging, and alerts
- File Management: Secure upload/download, virus scanning, S3-compatible storage, CDN integration
- Scheduled Tasks: Reminder dispatch, compliance checks, report generation, data maintenance
- Audit Logging: Comprehensive, immutable event logging for all data operations
- Caching Layer (Redis): Session management, rate limiting, real-time data sync, query caching for performance

Database Architecture

- Multi-Tenant Design: Logical data isolation per organization with shared infrastructure
- Encryption at Rest: AES-256 encryption for all sensitive data fields and storage
- Backup Strategy: Automated daily backups, point-in-time recovery, geo-redundant storage
- Performance Optimization: Query optimization, indexing strategy, connection pooling, read replicas

3.5 Laboratory Integration Specifications

Technology: HL7 v2.x / FHIR | RESTful APIs | Secure SFTP

BPDS CareTrack will integrate with external laboratory information systems to automate the import of urinalysis (UA) and drug screening results, eliminating manual data entry and ensuring real-time compliance monitoring.

Aegis Sciences Corporation Integration

- Provider: Aegis Sciences Corporation (Nashville, TN) – HITRUST CSF Certified healthcare testing laboratory
- Integration Type: Bidirectional HL7 v2.x messaging for electronic lab orders and results
- Capabilities: Comprehensive urine and oral fluid drug testing, 320+ drugs/metabolites including 100+ novel psychoactive substances (NPS), medication adherence monitoring for SUD/OUD treatment
- Data Flow: Automated result import with positive/negative status, substance identification, and clinical interpretation

Dominion Diagnostics Integration

- Provider: Dominion Diagnostics (North Kingstown, RI) – 25+ years specializing in SUD and pain management testing
- Integration Type: HL7 via Change Healthcare or direct API integration with Dominion Connect portal
- Capabilities: Urine drug monitoring, oral fluid testing, medication monitoring for MAT/OTP programs, randomization scheduling support
- Data Flow: Presumptive (IA) results within 24 hours, definitive (MS) confirmation results within 48-72 hours, color-enhanced PDF or structured HL7 results

Integration Features

- Automated Result Import: Real-time ingestion of lab results directly into client profiles with automatic compliance status updates
- Alert Triggers: Immediate notifications to providers and case managers for positive results, missed tests, or anomalies

- Compliance Dashboard: Visual tracking of UA history, positive/negative trends, and testing schedule adherence
- Court/Probation Reporting: Automated inclusion of lab results in compliance reports for drug court and probation officers
- HIPAA/42 CFR Part 2 Compliant: All data transmission encrypted via TLS 1.3, role-based access controls, comprehensive audit logging

4. TECHNICAL ARCHITECTURE

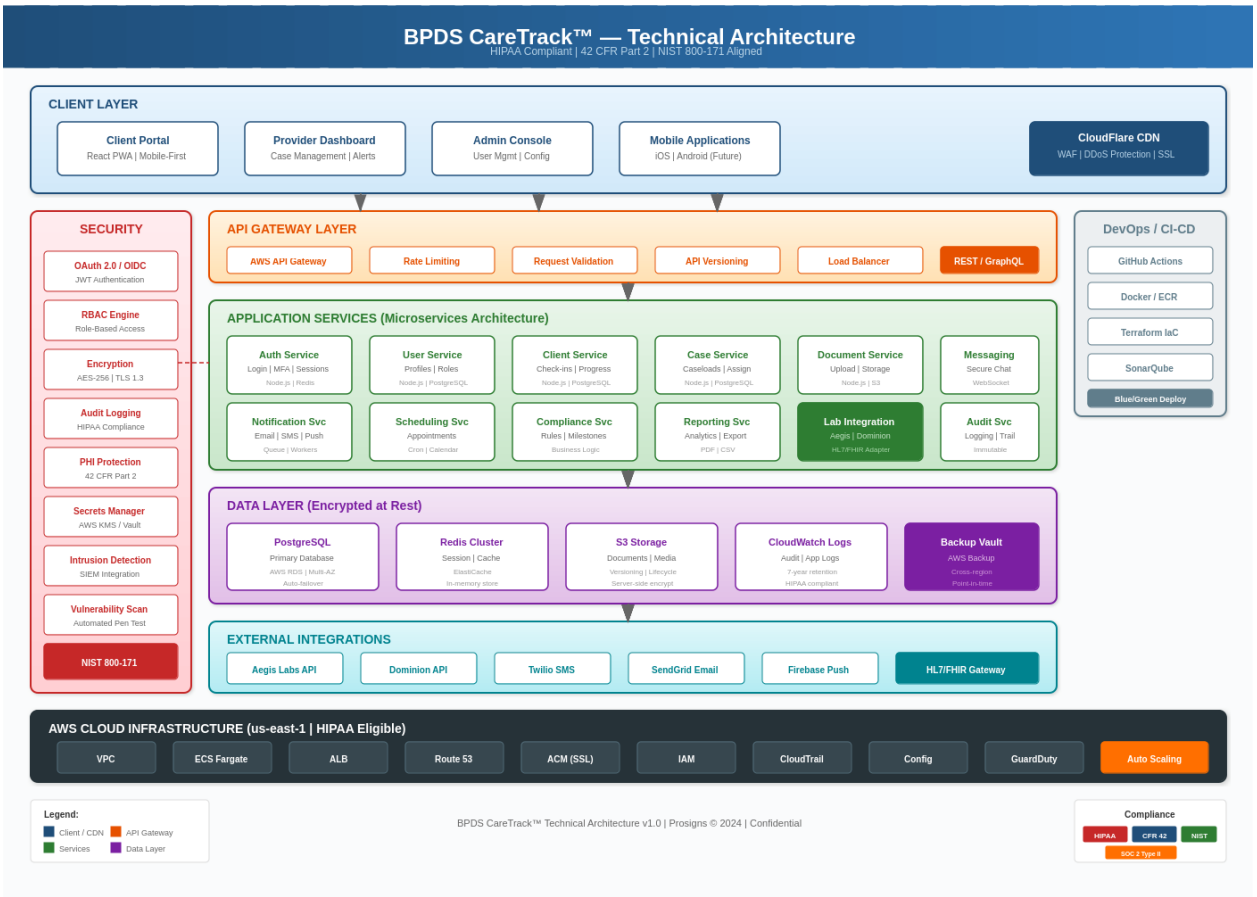

Figure 1: BPDS CareTrack Technical Architecture – HIPAA Compliant Cloud Infrastructure

The BPDS CareTrack architecture is designed as a defense-in-depth, HIPAA-compliant cloud platform that ensures data security, high availability, and seamless scalability. Each layer serves a specific function in protecting sensitive client information while enabling real-time engagement and compliance monitoring.

Client Layer

The client layer provides role-specific interfaces optimized for each user type. The Client Portal delivers a mobile-first Progressive Web App (PWA) for daily check-ins, appointment management, and secure messaging. The Provider Dashboard gives case managers real-time caseload visibility with alert prioritization. The Admin Console enables program administrators to manage users, configure workflows, and generate compliance reports. All traffic is protected by CloudFlare CDN, providing Web Application Firewall (WAF) protection, DDoS mitigation, and SSL/TLS termination.

Security Layer

Security is foundational to the architecture, not an afterthought. OAuth 2.0/OpenID Connect provides industry-standard authentication with JWT tokens. The Role-Based Access Control (RBAC) engine enforces granular permissions ensuring users only access data appropriate to their role. All data is encrypted using AES-256 at rest and TLS 1.3 in transit. Comprehensive audit logging captures every data access and modification for HIPAA compliance. PHI Protection controls ensure 42 CFR Part 2 compliance for substance use disorder records, with consent-based disclosure tracking.

API Gateway

The API Gateway serves as the single entry point for all client requests, built on NestJS with TypeScript. It provides request validation and sanitization to prevent injection attacks, rate limiting to protect against abuse, request routing to appropriate microservices, and API versioning for backward compatibility during updates.

Services Layer

The services layer implements core business logic through specialized microservices: the Auth Service manages authentication, sessions, and multi-factor authentication; the Notification Service orchestrates SMS, email, and push notifications for reminders and alerts; the Compliance Service tracks appointments, check-ins, UA results, and generates compliance reports; the Messaging Service enables secure, encrypted communication between clients and providers; the Analytics Service aggregates engagement metrics and program performance data; and the Document Service handles secure file uploads, virus scanning, and storage.

Data Layer

The data layer employs a multi-database strategy optimized for different workloads. PostgreSQL serves as the primary relational database with HIPAA-capable configuration, ACID compliance, and row-level security for multi-tenant data isolation. Redis provides high-performance caching for session management, real-time features, and rate limiting. Amazon S3 delivers secure, encrypted object storage for documents, images, and audit logs with configurable retention policies.

External Integrations

CareTrack integrates with best-in-class external services: Twilio provides HIPAA-eligible SMS messaging for appointment reminders and alerts; SendGrid delivers transactional email with delivery tracking; Firebase Cloud Messaging enables cross-platform push notifications; and the HL7/FHIR Gateway facilitates bidirectional laboratory integration with Aegis Sciences and Dominion Diagnostics for automated UA result import and compliance tracking.

Cloud Infrastructure

The platform runs on AWS HIPAA-eligible infrastructure in the us-east-1 region. Key components include: VPC with private subnets for network isolation; ECS Fargate for serverless container orchestration without managing servers; Application Load Balancer (ALB) for traffic distribution and health checks; Route 53 for DNS management and failover; AWS Certificate Manager (ACM) for SSL/TLS certificate automation; IAM for fine-grained access control; CloudTrail for API audit logging; AWS Config for compliance monitoring;

GuardDuty for threat detection; and Auto Scaling for automatic capacity adjustment based on demand. This infrastructure is deployed and managed using Terraform Infrastructure-as-Code with blue/green deployment strategies for zero-downtime updates.

4.1 Technology Stack Summary

Layer	Technology	Rationale
Mobile App	Flutter 3.x (Dart)	Single codebase for iOS/Android, native performance, hot reload, extensive widgets
Web App	Angular 17+	Enterprise-grade framework, TypeScript, dependency injection, comprehensive testing
API Layer	Node.js + NestJS	High-performance async I/O, TypeScript, modular architecture, real-time apps
Database	PostgreSQL 15+	HIPAA-capable, ACID compliance, JSON support, excellent security features
Cache Layer	Redis	Session management, rate limiting, real-time features, performance optimization
Cloud Platform	AWS / GCP	HIPAA BAA available, SOC 2 certified, comprehensive security services
Containerization	Docker + Kubernetes	Consistent deployments, horizontal scaling, self-healing, rolling updates
CI/CD	GitHub Actions	Automated testing, security scanning, deployment pipelines
SMS Gateway	Twilio	HIPAA-eligible, global coverage, reliable delivery, comprehensive APIs
Push Notifications	Firebase Cloud Messaging	Cross-platform support, reliable delivery, analytics integration

4.2 Security Architecture

Security is architected as a foundational element, not an afterthought. The platform implements defense-in-depth principles across all layers.

Security Domain	Implementation	Compliance Alignment
Data in Transit	TLS 1.3, certificate pinning, HSTS	HIPAA 164.312(e)(1), NIST SC-8
Data at Rest	AES-256 encryption, key management	HIPAA 164.312(a)(2)(iv), NIST SC-28
Authentication	MFA, JWT, session management, password policy	HIPAA 164.312(d), NIST IA-2
Authorization	RBAC, least privilege, resource-level ACL	HIPAA 164.312(a)(1), NIST AC-3
Audit Logging	Immutable logs, tamper detection, retention	HIPAA 164.312(b), NIST AU-2

Intrusion Detection	Anomaly detection, failed login monitoring	NIST SI-4
Vulnerability Mgmt	Dependency scanning, penetration testing	NIST RA-5
Incident Response	Defined procedures, breach notification	HIPAA 164.308(a)(6), NIST IR-1

4.3 Disaster Recovery & Business Continuity

BPDS CareTrack is engineered with comprehensive disaster recovery and business continuity capabilities to ensure uninterrupted service delivery for critical treatment engagement and compliance monitoring operations.

Recovery Objectives

Metric	Target	Description
Recovery Point Objective (RPO)	≤ 1 hour	Maximum acceptable data loss; continuous replication to standby region
Recovery Time Objective (RTO)	≤ 4 hours	Maximum acceptable downtime; automated failover with manual verification
Geographic Redundancy	Multi-AZ + Cross-Region	Primary: us-east-1 (N. Virginia); DR: us-west-2 (Oregon)
Backup Retention	30 days / 12 months	Daily backups retained 30 days; monthly archives retained 12 months

Failover Architecture

- **Active-Passive Configuration:** Primary region handles all traffic; standby region receives continuous replication
- **Automated Health Checks:** Route 53 health checks with automatic DNS failover on 3 consecutive failures
- **DR Testing:** Quarterly failover drills with documented results; annual full-scale DR exercise

4.4 Accessibility Compliance (Section 508 / WCAG 2.1)

BPDS CareTrack is designed to meet Section 508 and WCAG 2.1 Level AA standards ensuring equal access for all users including individuals with disabilities.

Standard	Implementation
WCAG 2.1 Level AA	Full compliance with Level A and AA success criteria; third-party audit prior to deployment
Section 508	Federal accessibility compliance; VPAT documentation provided upon request
Screen Reader	Full ARIA labeling, semantic HTML, proper heading hierarchy, live regions
Keyboard Navigation	All functionality accessible via keyboard; visible focus indicators; logical tab order
Color Contrast	Minimum 4.5:1 ratio for normal text; color never sole indicator; high-contrast mode

4.5 Data Governance & Privacy

BPDS CareTrack implements comprehensive data governance exceeding HIPAA requirements and addressing 42 CFR Part 2 enhanced protections for substance use disorder records.

Data Classification

Classification	Data Types	Handling Requirements
Restricted (42 CFR)	SUD diagnosis, treatment records, UA results, medication (MOUD), counseling notes	Written consent required; no re-disclosure; audit every access
Confidential (PHI)	Demographics, contact info, appointments, general health, insurance	HIPAA safeguards; minimum necessary; TPO permitted; BAA required
Internal	System logs, aggregated analytics, de-identified data, operational metrics	Role-based access; encrypted storage; retention per policy

Breach Notification (HIPAA 45 CFR 164.410)

- **Within 24 Hours:** Initial assessment; State security contact notified; incident response activated
- **Within 72 Hours:** Written preliminary report including scope, affected data, containment actions
- **Within 60 Days:** Individual notifications; HHS notification if ≥500 individuals affected

5. PROJECT EXECUTION FRAMEWORK

5.1 Implementation Timeline

Phase	Duration	Key Activities	Deliverables
Phase 1: Discovery & Design	Weeks 1-3	Requirements validation, UX research, architecture design	PRD, wireframes, Figma prototypes, technical architecture doc
Phase 2: Foundation	Weeks 4-9	Backend API core, database setup, auth system, admin scaffold	API v1 endpoints, database schema, authentication service
Phase 3: Core Development	Weeks 10-18	Mobile app, web portal features, notifications, messaging	Mobile app beta, admin dashboard, provider workstation
Phase 4: Integration	Weeks 19-24	SMS/email integration, reporting, analytics, security hardening	Twilio integration, reporting module, security assessment
Phase 5: Launch	Weeks 25-28	UAT, performance testing, app store submission, deployment	Production deployment, app store listings, documentation

5.2 Project Governance

The governance structure ensures clear accountability while providing Brittany Pelletier with expert technical and strategic guidance throughout the project.

Role	Assigned To	Responsibilities
Executive Sponsor	**Brittany Pelletier, CEO (BPDS)**	Project ownership, final decision authority, stakeholder representation, contract governance
Technical & Strategic Advisor	**Nayab Raheel, CEO (Prosigns)**	Technical guidance, strategic advisory, architecture oversight, escalation support for Executive Sponsor
Project Manager	Prosigns PM	Day-to-day management, scheduling, risk management, status reporting
Solution Architect	Prosigns Senior Architect	Technical design, architecture decisions, security oversight
Technical Lead	Prosigns Lead Developer	Development coordination, code review, technical problem-solving

5.3 Risk Management Framework

Risk Category	Likelihood	Impact	Mitigation Strategy
Scope Creep	Medium	High	Formal change control process, documented baseline, impact analysis
Resource Availability	Low	Medium	Dedicated team allocation, backup resources, cross-training
Technical Complexity	Medium	Medium	Proof-of-concept validation, architectural spikes, expert consultation
Security Vulnerabilities	Low	High	Security-first development, automated scanning, penetration testing

6. QUALITY ASSURANCE FRAMEWORK

6.1 Testing Strategy

Testing Type	Scope	Tools & Approach
Unit Testing	Individual components	Jest, Jasmine, Flutter test framework, 80%+ coverage target
Integration Testing	API endpoints, services	Supertest, Postman, automated test suites, CI pipeline
E2E Testing	Complete user workflows	Cypress (web), Appium (mobile), critical path validation
Security Testing	Vulnerability assessment	OWASP ZAP, dependency scanning, third-party security audit
Performance Testing	Load, stress, scalability	k6, Artillery, baseline establishment, bottleneck identification
UAT	Business requirements	Structured test cases, client-led execution, defect tracking

6.2 Acceptance Criteria

Final system acceptance requires satisfaction of all following criteria:

1. **Functional Compliance:** 100% of documented requirements implemented and verified
2. **UAT Completion:** All critical and high-priority test cases passed, no unresolved S1/S2 defects
3. **Security Validation:** Penetration test completed; all critical/high findings remediated
4. **Performance Standards:** API response < 500ms (95th percentile), page load < 3 seconds
5. **Documentation Delivery:** All technical and user documentation complete and approved
6. **Training Completion:** Role-based training sessions delivered, materials available

7. PROJECT TEAM

7.1 Dedicated Resources

Role	Allocation	Key Responsibilities
Project Manager	100%	Project governance, stakeholder management, risk management, status reporting
Solution Architect	50%	Technical architecture, security design, compliance guidance
UI/UX Designer	100% (Phase 1-2)	User research, wireframes, prototypes, design system, accessibility
Senior Flutter Developer	100%	Mobile app architecture, iOS/Android development, offline functionality
Senior Angular Developer	100%	Web portal architecture, dashboard development, responsive design
Senior Node.js Developer	100%	API development, database design, integrations, security implementation
QA Engineer	100%	Test strategy, automation, security testing, UAT support
DevOps Engineer	50%	CI/CD pipelines, cloud infrastructure, monitoring, deployment automation

7.2 Leadership & Advisory Structure

Brittany Pelletier, CEO of BPDS, serves as Executive Sponsor and Project Owner with full decision-making authority. To ensure informed decision-making on technical matters, Nayab Raheel, CEO of Prosigns, serves as Technical & Strategic Advisor.

Executive Sponsor (Brittany Pelletier, BPDS)

- Project Ownership: Ultimate authority on all project decisions and direction
- Stakeholder Representation: Primary interface with State of NH and program stakeholders
- Business Vision: Ensures the product aligns with market needs and BPDS objectives
- Final Approval: Sign-off authority on deliverables, milestones, and scope changes

Technical & Strategic Advisor (Nayab Raheel, Prosigns)

- Technical Guidance: Translates technical decisions into business impact for informed decision-making
- Strategic Advisory: Market positioning, pricing strategy, and scaling recommendations
- Architecture Oversight: Ensures technical decisions align with long-term product vision
- Escalation Support: Available to the Executive Sponsor for complex technical or strategic matters

8. SERVICE LEVEL AGREEMENT

8.1 Production System SLA (Post-Launch)

Metric	Target	Measurement
System Availability	99.9% uptime	Monthly, excluding scheduled maintenance
Scheduled Maintenance	< 4 hours/month	Weekends, 72-hour advance notice
API Response Time	< 500ms (95th percentile)	Application performance monitoring
Data Backup	Daily automated	30-day retention, geo-redundant
Recovery Time Objective	< 4 hours	Full system recovery target

8.2 Support & Incident Management

Post-warranty support through a structured incident management framework with defined severity levels and response times.

Severity Classification Matrix

Severity	Definition	Response	Resolution	Escalation
S1 Critical	System down; data breach; complete loss of service	15 minutes	4 hours	Immediate to CTO
S2 High	Major feature unavailable; performance degradation	1 hour	8 hours	2 hrs to Tech Lead
S3 Medium	Minor feature issue; workaround available	4 hours	24 hours	8 hrs to PM
S4 Low	Cosmetic issue; enhancement request	1 business day	Next release	Standard review

Support Channels

- **24/7 Emergency Hotline:** Dedicated phone for S1/S2 incidents; direct escalation to on-call engineer
- **Help Desk Portal:** Web-based ticket submission 24/7; business hours response for S3/S4
- **Business Hours:** Monday–Friday 8:00 AM – 6:00 PM EST (excluding federal holidays)

9. TERMS & CONDITIONS

9.1 Intellectual Property Rights

- Custom Deliverables: Upon final payment, BPDS owns all custom code, designs, documentation, and configurations created specifically for this project.
- Prosigns IP: Prosigns retains ownership of pre-existing frameworks, libraries, methodologies, and tools used in delivery.
- Third-Party Components: Open-source and third-party libraries remain under their respective licenses.
- License Grant: BPDS receives perpetual, royalty-free license to use any Prosigns background IP incorporated into deliverables.

9.2 Confidentiality

- Mutual NDA: Both parties agree to protect confidential information disclosed during the engagement.
- Scope: Includes business strategies, technical designs, client data, pricing, and proprietary processes.
- Duration: Confidentiality obligations survive contract termination for 3 years.

9.3 Warranty

- Warranty Period: 90 days from production deployment acceptance.
- Coverage: Defects in materials and workmanship, deviation from approved specifications.
- Remediation: Bug fixes and corrections at no additional cost during warranty period.

9.4 Change Control

- Change Request Process: All scope changes must be documented via formal change request.
- Impact Analysis: Prosigns will provide impact assessment within 48 business hours.
- Approval Required: No work proceeds without written approval from authorized representatives.

9.5 Exit Strategy & Data Portability

BPDS CareTrack ensures data sovereignty and seamless transition capability upon contract termination.

Data Export

- **Formats:** All data exportable in CSV, JSON, XML, PDF; database dumps in PostgreSQL-native format
- **Timeline:** Export initiated within 5 business days; complete within 30 days

Transition Support

- **Transition Period:** 90-day period with full system access maintained
- **Knowledge Transfer:** Technical docs, data dictionary, API specs, operational runbooks provided

Data Destruction

- **Timeline:** All State data destroyed within 30 days of confirmed successful export
- **Method:** NIST SP 800-88 compliant media sanitization; cryptographic erasure
- **Certification:** Written destruction certificate provided within 10 business days

10. NEXT STEPS

We are excited about the opportunity to partner with BPDS in bringing CareTrack™ to market. Below are the recommended next steps to initiate this engagement:

1. **Proposal Review:** Review this proposal in detail. We are available for clarification calls at your convenience.
2. **Questions & Discussion:** Schedule a follow-up call to address any questions, discuss customizations, or explore alternatives.
3. **Proposal Acceptance:** Sign the attached Statement of Work and return via email to nayab@prosigns.io.
4. **Contract Execution:** Execute Master Services Agreement and NDA (provided upon acceptance).
5. **Kickoff Meeting:** Schedule kickoff meeting to initiate the project.

> *"Let's build something great together."*
>
> — Nayab Raheel, CEO & Founder, Prosigns

11. AUTHORIZATION & ACCEPTANCE

By signing below, the parties acknowledge acceptance of this proposal and authorize Prosigns to commence work in accordance with the terms and conditions herein.

Global Technology Solutions

APPENDIX A: GLOSSARY OF TERMS

Term	Definition
API	Application Programming Interface - protocols for building software applications
BAA	Business Associate Agreement - HIPAA-required contract with vendors handling PHI
CI/CD	Continuous Integration/Continuous Deployment - automated software delivery
HIPAA	Health Insurance Portability and Accountability Act - federal health data protection law
JWT	JSON Web Token - secure method for transmitting authentication information
MFA	Multi-Factor Authentication - security requiring multiple verification methods
NIST	National Institute of Standards and Technology - federal security standards agency
PHI	Protected Health Information - individually identifiable health data under HIPAA
RBAC	Role-Based Access Control - permission management based on user roles
SaaS	Software as a Service - cloud-based software delivery model
SLA	Service Level Agreement - contract defining service performance standards
UAT	User Acceptance Testing - final testing phase with end-user validation
42 CFR Part 2	Federal regulation providing additional protections for substance use disorder records

— END OF PROPOSAL —
